

LAMILUX Composites at the transport logistic in Munich

Revolutionary innovations made of GRP

From 9 - 12 May, numerous specialized service providers will be presenting their services for logistics, transport and forwarding at the transport logistic trade fair in Munich, and LAMILUX Composites will be among them. The specialist for fibre-reinforced composites can be found in the ITCO Tank Container Village in Hall B4 at Booth 217/318.

At the international trade fair for logistics, mobility, IT and supply chain, LAMILUX Composites will be presenting some revolutionary innovations from the field of glass-fibre reinforced plastics: including the revolutionary tank lining material LAMILUX X-treme. Developed and manufactured in Germany, the material is about five times stronger and 30 % lighter than other tank lining materials. LAMILUX X-treme is the ultimate in tank lining materials. It is a fibre-reinforced composite material with the maximum possible content of reinforcing fibres in a highly elastic epoxy resin matrix. The excellent strength saves operators time and money by reducing maintenance and repair costs as well as container downtime. The most recently presented world innovation, LAMILUX SUNSATIION®, can also be admired at transport logistic in Munich. The new gelcoat technology, with 20 times better UV resistance than the gelcoats previously available on the market, gives GRP top layers of side walls, roofs and doors permanent UV resistance and extreme colour and gloss retention. LAMILUX SUNSATIION® expands the horizons for customers in terms of image, appearance, maintenance and value and keeps fleets looking like new even after decades in the sun. The revolutionary development on the market for glass fibre reinforced plastics not only inspires customers, but also convinced three
