ARGUS® 240: intec introduces first pure fiber tester

Lüdenscheid (ots) -

intec Gesellschaft für Informationstechnik mbH, the German innovation leader in the field of telecommunications measurement technology with more than 30 years of experience, introduces the new ARGUS® 240 Optical xPON Tester, the first pure fiber tester.

The ARGUS® 240 reliably tests at GPON and XGS-PON interfaces in the quality you have come to expect. An additional integrated broadband power meter enables the measurement of other wavelengths such as 1550 nm. With the selective xPON-OPM, the optical power of GPON and XGS-PON can be measured simultaneously. In addition, the PON ID can be read out and a complete ONT simulation with IP and performance tests can be done.

Furthermore, the ARGUS® 240 has many other test functions, such as Wireless (WLAN), triple play tests such as VoIP, IPTV and data in the form of upload/download, iperf or speed tests up to 2.5 Gbit/s.

The SFP slot can be used, among other things, for the deployment of Active Ethernet, as is often the case in FTTH installations. In addition, the Fiber Inspection Tool can be connected via USB; it detects scratches and defects on optical fibers and displays them as a video image and in tabular form.

About intec Gesellschaft für Informationstechnik mbH

For more than 30 years, intec Gesellschaft für Informationstechnik mbH has successfully been developing products for the international telecom markets. Specializing in high-quality telecommunications measurement equipment, we are one of the leading

suppliers of fiber optic, xDSL, G.fast and IP measurement technology in Europe and beyond.
