## LGM Products Achieves ActivFire Approval for Signaline FT-EN Linear Heat Detection Cables and recognized by UK Government for excellence in Export Sales

Farnham, UK (ots) -

LGM Products, a leading provider of fire detection and safety solutions, is thrilled to announce the attainment of ActivFire approval for their renowned Signaline FT-EN range of Signaline Linear Heat Detection cables.

Signaline FT-EN has rapidly gained recognition since its introduction to the market in 2020, earning accolades as an award-winning and best-selling linear heat detection solution. Now, with the coveted ActivFire certification, Signaline FT-EN reinforces its position as a market leader in linear heat detection worldwide.

ActivFire is a respected certification scheme administered by the Fire Protection Association Australia (FPA Australia), an esteemed industry body dedicated to supporting and promoting the fire protection industry in the country. The ActivFire approval signifies that Signaline FT-EN has undergone meticulous independent assessment and successfully meets the stringent Australian Standards and regulatory requirements for fire safety.

Obtaining ActivFire approval is a significant milestone for LGM Products as it guarantees users, regulators, and stakeholders that Signaline FT-EN has undergone rigorous testing and adheres to the necessary standards, ensuring its reliability and effectiveness in mitigating fire risks.

Mr. Nic Mogford-Reveas, Sales Director at LGM Products, expressed his delight, stating, "LGM Products has built a strong reputation for supplying market-approved, high-quality, and reliable products. We are thrilled to announce the addition of ActivFire certification to our prestigious lineup of international and domestic approvals, specifically for our Signaline FT-EN range. This achievement not only expands our product's reach within the Australian market but also serves as a testament to its quality, further solidifying its position as a trusted choice for linear heat detection systems."

Signaline FT-EN is the first product to be approved to the European standard EN54 part 28:2016 and listed by ActivFire. This significant achievement reflects LGM's commitment to delivering industry-leading fire detection solutions.

This new approval adds to an already excellent year at LGM Products. In April, LGM Products was recognized for excellence in export sales in the 2023, 'Made in the UK, Sold to the World' export awards, run by the UK Department for Trade.

These awards, launched as part of the UK Government's export strategy, celebrate the outstanding international trading achievements of small businesses across the nation.

The 'Made in UK, Sold to the World' export strategy, initiated by the UK Government last year, serves as a collaborative framework between the government and businesses. Its primary aim is to empower enterprises in the global marketplace by providing exceptional export support and guidance.

An expert panel of judges, assessing numerous high-quality entries, commented on the crucial link between international sales and business growth and commended the exceptional attention to detail demonstrated by the shortlisted candidates.

Expressing gratitude for the recognition, Sophie Mogford-Reveas, Operations Director at LGM Products, said, "We extend our heartfelt thanks to the Department of Trade for acknowledging LGM Products' contributions through these awards. Our appreciation also goes out to our valued customers, global partners, and international friends who have played a pivotal role in

shaping LGM's remarkable export success."

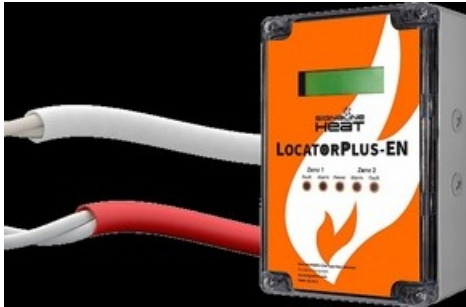

Undeterred by their achievements, LGM Products remains dedicated to expanding its export journey. In pursuit of this goal, the company has exciting plans to participate in three prominent international expos this year: InterSolar, Secutech, and METSTRADE. These events present excellent opportunities to forge new partnerships, explore global markets, and showcase the innovative products and solutions that have earned LGM its esteemed reputation.

LGM Products invites industry professionals, partners, and stakeholders to join them at these upcoming expos to discover how their cutting-edge offerings can create mutually beneficial collaborations and drive global business growth.
